Scolmore International Ltd

Fitted in UK's First Sustainable Homes

Click Scolmore has supplied a range of its wiring accessory products for an exclusive development of brand new Eco Homes being built by leading North East house builder, Dunelm Homes UK.

The Swedish-style Climät Hus sustainable homes are the first of their kind to be built in the UK and they provide house purchasers with a unique opportunity to design their own environmentally sustainable homes.

Click Scolmore's Mode white wiring accessories products are being installed in all eight of the new eco homes and are also being used across the rest of the new Grange development. Situated just south of Durham City, the development, when completed, will see a total of 78 new homes constructed.

Chosen by Dunelm Homes and Total Electrical Solutions for their high quality, finish and cost, the Mode wiring accessories offer a flexible solution to virtually any domestic wiring requirement.

Comments Michael Bambling of Total Electrical Solutions: "I've been using Click Scolmore's wiring accessory products for over three years now and can't fault them on the quality and performance. Dunelm Homes are very happy with the products and have specified them for a number of other major developments they are working on."

While the Mode products are fitted as standard on the latest Eco and new build homes, house buyers will have the option to upgrade to Click Scolmore's Deco range which offers a comprehensive range of decorative products in a variety of finishes.
